# SELF-PROPELLED VEHICLES FROM TEBBE – THE VERY BEST, WHATEVER THE JOB

When you opt for a spreader body from TEBBE, you make a conscious decision for high performance on a daily basis

TEBBE is Europe's leading manufacturer of spreader bodies for self-propelled work machines and the various carrier vehicles. The excellent market position of the TEBBE spreaders becomes apparent when making investments of this magnitude. These spreaders stand for excellent precision, high performance and durability that is unrivalled in international markets.

Universal spreader bodies from TEBBE are also used by the manufacturers Ploeger and Vredo. These machines need to deliver absolute precision under the toughest of conditions. TEBBE's years of experience means that it knows exactly what is required from body units. Spreaders from TEBBE are mounted to all conventional lorry types. A combination of a lorry and spreader, and attached low-loader with an excavator guarantee fast and independent work on roads and on the fields.

The bodies on self-propelled work machines are designed as permanently mounted units or as interchange units.

The interchange system is locked with container locks and lifted with hydraulic cylinders.

#### The benefits of self-propelled transporters from TEBBE:

- > Extremely flexible and versatile
- > Absolute precision, at maximum throughput rates
- > Durable construction for stable continuous operation
- > Available as interchange systems or permanently mounted units
- > Compatible with all conventional vehicle types
- > Premium technology from the European market leader
